

Blueberry Product Recommendation Quiz Builder

This extension for Magento 2 integrates your store with Blueberry, enabling the use of the advisor and conversion tracking for improved customer engagement and analytics.

Features

- Injects Blueberry advisor script into your storefront
- Tracks conversions and sends order/session data to Blueberry
- Admin configuration for Tenant ID and debug logging

Installation

Composer (Recommended)

1. Add the module to your `composer.json` or install via:

```
composer require blueberry/magento2-module
```

2. Enable the module:

```
php bin/magento module:enable Blueberry_Blueberry
php bin/magento setup:upgrade
```

3. Install cronjobs (if not already done):

```
php bin/magento cron:install
```

Manual

1. Copy the contents of this repository to `app/code/Blueberry/Blueberry`.
2. Run:

```
php bin/magento module:enable Blueberry_Blueberry
php bin/magento setup:upgrade
```

3. Install cronjobs (if not already done):

```
php bin/magento cron:install
```

Configuration

1. Go to **Stores > Configuration > Blueberry > General** in the Magento Admin.
2. Enter your **Tenant ID** (find it in your Blueberry account integrations page).
3. (Optional) Enable debug logging for conversion requests.

Usage

- The Blueberry advisor widget will appear on your storefront if Tenant ID is set.
- Conversion events are tracked automatically after checkout.

Support

For support, contact Blueberry or your integration provider.
